HME-12VBBSLR 12V Battery Case with Solar Charger Instruction and Precautions

1. Before first use, charge the battery 20 hours with the accompanied AC charger (15V600mA).
2. Once the battery is charged, the solar panel will provide trickle charge to maintain the voltage of the battery while it is in use.
4. Connection of battery: Wire with Red cover connects to the Battery RED terminal. Wire with Black cover connects to the Battery Black terminal.
5. Do not expose battery to high heat, as it may explode.
6. Please contact your local solid waste facility for proper disposal of the battery.
7. Ensure box lid is securely closed to ensure proper waterproofing.
8. Recharge the battery every 3 months even if the unit is not in use.
9. Rotary pivot of the solar panel allows you to position solar panel to desire angle so it can absorb the maximum sunlight
10. Amorphous solar panel efficiently charges in all weather conditions, including cloudy days.
