

You don't have to worry about wind blowback or misfires. Thanks to gel stream technology, this pepper gel allows you to quickly hit the mark and protect yourself against threats from a distance.

- Gel stream technology dispenses as a thick, glue-like substance that sticks to and incapacitates an attacker
- OC pepper gel causes respiratory distress and coughing, impaired vision and an intense burning sensation to the skin
- UV dye leaves a long-lasting residue to support investigation and identification

### **Enhanced control and safety**

Easy to grab, aim and fire, this pepper gel is engineered to deliver maximum accuracy and security. An integrated safety pin on the pistol grip handle means you don't have to stress about accidental misfires.

### **Always ready**

Pepper Gel Magnum 9 is ready if and when you need it. To deploy, pull out the safety pin on the pistol grip handle and press down on the yellow actuator button to spray the attacker.
