

BOOSTER DOG SEAT

1

Push the movable side of the metal bracket to the bottom of the booster seat.

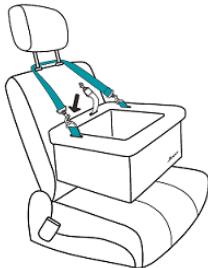

2

Place the liner in the booster seat and pass the safety tether through the slit at the top back. Put the quilted mat on it. Pass each D-ring through the left and right slits in the liner respectively. Hook one side of the headrest strap on the right side D-ring.

Let's make every seat a window seat

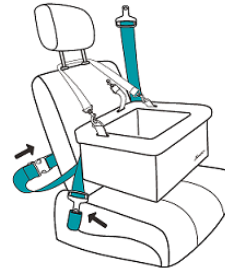

3

Loop the headrest strap over your vehicle's headrest, and then hook it on the left side D-ring. Adjust the height so your pet can see out the window.

CAUTION: FOR PET USE ONLY. Intended for pet transport only. Not intended for use as a permanent habitat. Never leave pet unattended when using this Booster Dog Seat.

4

Buckle the seat belt through the two loops on the back of the booster seat. If you're using it on the front seat, fasten the lower strap of the booster snugly around the back of the seat, and then tighten it.

Always attach the safety tether to your pet's harness and adjust it to keep your pet secure and safe inside the booster seat.
